

Shih-Hsien Fest on Hyperbolic Conservation Laws and Kinetic Theory

Date: 4th-5th April 2024
Location: Seoul National University

4th (Thursday)		5th (Friday)	
10:00-10:40	Location: 129-101, Chair: Seung Yeal Ha Tommaso Ruggeri (University of Bologna) A Nonlinear approach to viscoelasticity via rational extended thermodynamics	Location:129-101, Chair: Yinglong Zhang Shih-Hsien Yu (Academia Sinica) Navier-Stokes equations in gas dynamics: Greens function, singularity, and well-posedness	
10:40-11:10	Haitao Wang (Shanghai Jiao Tong University) Pointwise estimate of the solution with polynomial tail to Boltzmann equation	Jeongho Kim (Kyung Hee University) Quantified asymptotic analysis for the relativistic quantum mechanical system with electromagnetic fields	
11:10-11:40	Yinglong Zhang (Shandong University) Multi-cluster flocking in the Motsch-Tadmor model	Xiongtao Zhang (Wuhan University) Global well-posedness of non-isentropic Navier-Stokes equation with BV initial data	
11:40-12:10	Jinwook Jung (Hanyang University) Cucker-Smale model with singular communication weights	Dongnam Ko (The Catholic University of Korea) Convergence of the Discrete Consensus-Based Optimization Algorithm with Random Batch Interactions	
12:10-14:00	Lunch	Lunch	
14:00-14:40	Location: 27-220, Chair: Jinwook Jung Li Chen (University of Mannheim) Convergence in probability and Relative entropy method for moderate interacting system	Location:129-101, Chair: Jeongho Kim Qinghua Xiao (Chinese Academy of Sciences) Global Hilbert expansion for some non-relativistic kinetic equations	
14:40-15:10	Chunyin Jin (China Agricultural University) Optimal energy decay rate for a kinetic equation coupled with fluid equations	Young-Pil Choi (Yonsei University) Asymptotic analysis of kinetic models towards the compressible Euler-Poisson equations	
15:10-15:30	Break	Break	
15:30-16:00	Location: 27-220, Chair: Jinwook Jung Linglong Du (Donghua University) Consensus behavior for Hegselmann-Krause model	Location:129-101, Chair: Jeongho Kim Dohyun Kim (Sungkyunkwan University) Asymptotic convergence of heterogeneous first-order aggregations models: from the sphere to the unitary group	
16:00-16:30	Bora Moon (Hanyang University) Hydrodynamic limits of the Chern-Simon gauged models	Guanghui Jin (Yanbian University) Standing wave solution for the generalized Jackiw-Pi model	
16:30-17:00	Weiyuan Zou (Beijing University of Chemical Technology) Global well-posedness and optimal time decay rates of solutions to the (pressureless) Euler-Navier-Stokes system	Myeongju Kang (Gachon University) Phase-coupled models for synchronization with nonlocal temporal interactions	
17:00-17:30	Junhyeok Byeon (Seoul National University) Discrete consensus-based optimization	Gichan Bae (Seoul National University) Large amplitude problem of BGK model: Relaxation to quadratic nonlinearity	
17:30-20:00	Dinner	Banquet (Hoam Guest House)
